II. Listing of Claims

This list will replace all prior versions and listings of claims in the Application.

1. (Currently Amended) A medical grade deformer, comprising:

an axial member; and

a pliable tube mounted on said axial member and adapted to be deformed from a first, narrower diameter, configuration to a second, greater diameter, configuration, wherein the tube is slotted along a majority of its length in an axial direction, wherein said tube defines a plurality of slots such that when deformed to the second configuration, a plurality of axially displaced leaves extend from said tube to define said second configuration, wherein adjacent leaves touch each other in said second configuration.

- 2. (Original) A deformer according to claim 1, wherein said tube is slotted through its thickness.
- 3. (Canceled)
- 4. (Previously Presented) A deformer according to claim 1, comprising at least a first end of the deformer engaging a first end of said tube and adapted to apply compressive force to said tube for achieving said deformation.
- 5. (Previously Presented) A deformer according to claim 4, comprising at least a second end of the deformer engaging a second end of said tube and adapted to cooperate with said first end of the deformer to compress said tube.

US Ser. No. 10/561,124 Response to Office Action of April 27, 2010

- 6. (Previously Presented) A deformer according to claim 5, wherein said first and second ends of the deformer and said axial member lock to maintain said pliable tube in a greater diameter configuration.
- 7. (Original) A deformer according to claim 1, wherein said tube changes configuration by axial compression thereof.
- 8. (Original) A deformer according to claim 1, wherein said axial member is rigid.
- 9. (Canceled)
- 10. (Original) A deformer according to claim 1, wherein said axial member extends out of said tube and is attached to a handle.
- 11. (Original) A deformer according to claim 1, wherein said axial member comprises a release mechanism for release of said deformer from a delivery system.
- 12. (Original) A deformer according to claim 11, wherein said axial member comprises a locking mechanism for locking of said deformer in a greater diameter configuration in conjunction with release.
- 13. (Original) A deformer according to claim 1, wherein said deformer includes a channel adapted for bone filler flow.
- 14. (Original) A deformer according to claim 13, wherein said channel is formed in said axial member.

US Ser. No. 10/561,124 Response to Office Action of April 27, 2010

- 15. (Original) A deformer according to claim 13, wherein said channel is formed between said axial member and said tube.
- 16. (Original) A deformer according to claim 1, wherein said axial member extends from said tube and is adapted to function as a hinge of a joint.
- 17. (Original) A deformer according to claim 1, wherein said deformer forms a bone attachment unit for a prosthesis.
- 18. (Original) A deformer according to claim 1, comprising an enclosing bag, which surrounds said tube in said second configuration.
- 19. (Original) A deformer according to claim 18, wherein said bag is bio-degradable in the body.
- 20. (Original) A deformer according to claim 18, wherein said bag is porous.
- 21. (Original) A deformer according to claim 1, wherein said deformer defines a general volume in the shape of a cylinder when in said second configuration.
- 22. (Canceled)
- 23. (Original) A deformer according to claim 1, wherein said deformer defines an axially rotationally asymmetric general volume when in said second configuration.

US Ser. No. 10/561,124 Response to Office Action of April 27, 2010

- 24. (Original) A deformer according to claim 1, wherein said deformer defines a predetermined general volume when in said second configuration.
- 25. (Original) A deformer according to claim 1, wherein said deformer comprises a set of axially contiguous zones with different material properties.
- 26. (Original) A deformer according to claim 1, wherein said deformer has a non-smooth outer surface in said second configuration.
- 27. (Original) A deformer according to claim 1, wherein said deformer is stiff enough, when in said second configuration to resist a trans-axial force of at least 50 Kg.
- 28. (Original) A deformer according to claim 1, wherein said deformer, when in said second configuration has an axial applied force of at least 2 Kg.
- 29. (Original) A deformer according to claim 1, wherein said pliable material has a shore hardness of between 50A and 90D.
- 30. (Original) A deformer according to claim 1, wherein said pliable material is non-metallic.
- 31. (Original) A deformer according to claim 1, wherein said pliable material is polymeric.
- 32. (Original) A deformer according to claim 1, wherein said deformer includes at least one axial thread.

- 33. (Original) A deformer according to claim 1, wherein said deformer includes at least one circumferential thread.
- 34. (Original) A deformer according to claim 1, wherein said deformer, in said second configuration, defines a general volume and wherein said deformer fills at least 30% of said volume.
- 35. (Original) A deformer according to claim 1, wherein said deformer, in said second configuration, defines a general volume and wherein said deformer fills at least 50% of said volume.
- 36. (Canceled)
- 37. (Currently Amended) A deformer according to <u>claim 1</u> <u>claim 36</u>, wherein said tube defines at least three axially displaced leaves.
- 38. (Canceled)
- 39. (Currently Amended) A deformer according to <u>claim 1</u> <u>claim 36</u>, wherein an end leaf is shorter than a non-end leaf.
- 40. (Currently Amended) A deformer according to <u>claim 1 elaim 36</u>, wherein an end leaf is supported, on one side thereof, by an end cap of said deformer.

- 41. (Currently Amended) A deformer according to <u>claim 1</u> elaim 36, wherein adjacent leaves deform each other.
- 42. (Currently Amended) A deformer according to <u>claim 1</u> <u>claim 36</u>, wherein at least 50% of the leaves are deformed from a plane.
- 43-51. (Canceled)
